To: Human Resources Manager,

I am interested in applying for the position as a GIS CADD Technician-Mapping&Property because I have a strong interest in programming, analyzing and their applications. I have used ArcGIS to work on excel data and design maps for the city, with years working in the IT and geospatial CAD environment. With my background in Civil and Environmental Studies education, I have applied this knowledge through work experience in troubleshooting hardware and software problems with IBM.

I worked with flow diagrams using GIS mod files to show how 3D data modeling is displayed. I provided customer care in land development and the use of buildings structures and parking spaces. I have used Python, and JavaScript codes to make applications such as Heroku and unit testing. As a data scientist, I have extensive knowledge in MS Office and Linux systems. I worked and supervised with Transport Canada to manipulate data, designed CAD drawings for the department and sort geometric algorithms in ArcMap and by following the Accessibility for Ontarians with Disabilities (AODA) policies. Also, I am familiar with programming scripting languages with GPS, working with the transport division due diligence towards environmental risk. I do believe that I am fit for this position according to my years of experience and education background as a Civil Engineering Technologist with Bachelor of Environmental Studies with GIS programming.

Thank you in advance for taking a moment to review my application for the GIS Technologist position, I welcome the opportunity to meet and discuss further regarding my qualifications and interest in moving forward.

Yours sincerely,

mjasen

Jason Ma
